

A range of innovative products and services that enable businesses to manage their resources and deal with their waste in a sustainable and compliant way.

Windsor Waste Management is a market leader in the asbestos disposal industry and a significant provider of total waste management services for construction and related industries across the UK.

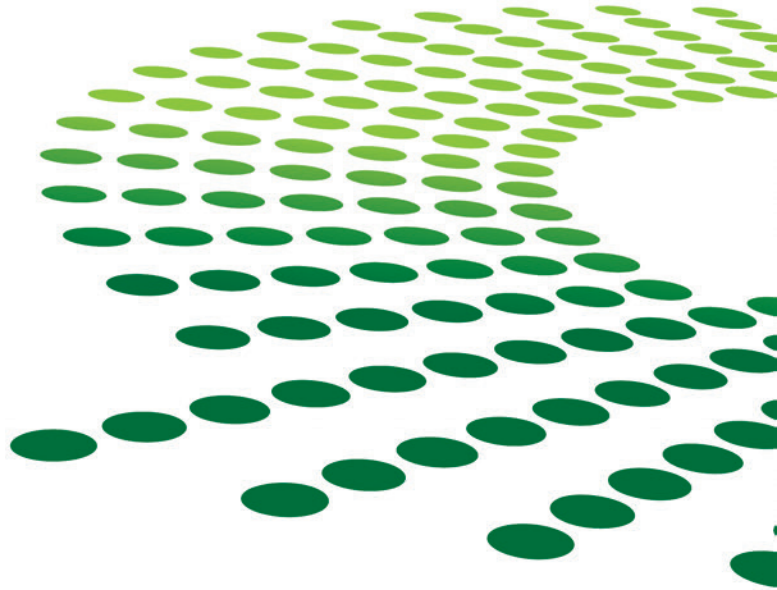

We provide environmentally responsible and fully compliant storage, collection and disposal services for all types of waste including:

- Asbestos waste
- Business waste
- Construction and demolition waste
- Contaminated land and fly tip
- Hazardous waste
- Lead paint and shot blast
- Waste electrical and electronic equipment (WEEE)

Our bespoke recycling and waste management services are designed to make customers' lives easier by providing comprehensive solutions and support services including day and night time collections and an online customer administration service.

Waste Cost Reduction Services (WCRS) provides national waste management solutions for businesses looking for increased recycling, lower costs and better solutions.

We operate in a wide variety of sectors including manufacturing, retail, commercial property management, food manufacture and event management. We supply all kinds of containers and equipment, and the full range of reuse, recycling, recovery and disposal options, helping our customers manage their waste in line with the waste hierarchy.

As a waste broker operating across the UK, we find, implement and maintain solutions that are:

- **Compliant**
- **Sustainable**
- **Comprehensive**
- **Bespoke**
- **Cost effective**
- **Easy to manage**

Our core services are supported with bespoke management information, Duty of Care audits and recycling trading to help our customers make money from the growing market for recyclables.

HAZIBAG

UN approved for Packing Groups II and III, Hazibag provides an innovative way to contain and transport solid hazardous waste.

Developed to overcome some of the limitations of existing, less practical, non-compliant collection systems, this flexible intermediate bulk container (FIBC) provides many benefits over drums and IBCs including:

- **Space saving on deliveries**
- **Less storage space**
- **Lower transport emissions**
- **Reduced transport costs**
- **Faster delivery time**

With a UK wide collection service for this innovative product, we don't just sell the bags but provide customers with a fully compliant, nationwide transportation and disposal service for all their solid hazardous waste.

Waste Confidence authenticates businesses zero waste to landfill claims with the UK's only independently verified zero waste to landfill certification scheme.

This internationally recognised standard is third-party validated, enabling producers of waste to authenticate their zero waste to landfill claims and give customers confidence that their processes and practices have been audited and verified.

Standard UL ECVP 2799 Zero Waste to Landfill was developed by UL (Underwriters Laboratories), an experienced global certification company. The zero waste to landfill standard gives waste diversion claims credibility over self-made claims.

A large green circle graphic at the bottom right of the page, containing the word 'WASTE' in white, bold, uppercase letters.

WASTE

ARI Global Technologies provides a unique thermochemical conversion technology (TCCT) that destroys asbestos and produces an inert product that can be recycled.

The patented technology was developed by American company, ARI Technologies Inc., and is nationally permitted by the US Environmental Protection Agency (EPA) as an alternative to asbestos disposal in landfill. It destroys asbestos fibres through a thermal and chemical process, producing an inert, non-toxic, product that can be recycled in many construction applications.

With the growing understanding of the importance of waste as a resource, and landfill tax almost doubling in the last five years, the economic and sustainability arguments combine to make a compelling case for an alternative disposal method for asbestos both in the UK and globally.
